**Description of Bulletin:** This bulletin is to alert of the change from 60 LED lens assemblies to the new 44 LED lens assemblies and to educate regarding the change to the part numbers for these lens assemblies.

**Background Details:** The original design of the multi-LED lens assemblies was 60 LED thru hole technology for the LEDs and components. The new design is a 44 LED surface mount technology for the LEDs and components. This surface mount technology allows the design to be multi-volt with improved light output, improved surge protection and conformal coating for corrosion resistance.

**Bulletin Details:** 60 LED lens assemblies will be phased out to be replaced by the new 44 LED lens assemblies. The form, fit and function are not affected by this change.

Along with this change, the lens assembly part numbers are changing. Below is a cross reference of the old part number to the new part number. Call Customer Service if you have any questions or concerns.
