Due to very low market demand and tooling reaching its end-of-life, Betts has discontinued its line of aluminum body Series-200 lamps. These aluminum bodies have been phased out and replaced with our popular line of PBT (Valox™) body Series-200 lamps.

PBT is a thermoplastic engineered polyester resin which combines high mechanical, thermal and electric insulator properties with very good chemical and environmental resistance. The two styles have very similar form, fit and function with the only dimensional difference being the depth of the light assembly. This dimension is shown below and offers an advantage of increased visibility of the lamp from the sides. The mounting dimensions are identical for both.

All part numbers that utilized the aluminum body are discontinued and cross referenced to a close-as-possible replacement with the PBT body. Please contact a Betts' Customer Service Representative at 814-723-1250 with any questions or concerns.
